- They provide powerful analysis, financial planning, forecasting and reporting solutions for the financial services industry.
- They are used by more than 80% of UK financial institutions and their software is accessed by over 50% of the adviser market.

About the questionnaire

This questionnaire helps identify the amount of risk you are prepared to take. This type of risk profiling works by establishing your attitude towards common investment risk such as:

- capital loss;
- not meeting a desired investment objective; and
- investment volatility (the potential ups and downs that a fund may experience over time).

By completing the 15 questions in this questionnaire your financial broker is able to identify your attitude to risk. Therefore, this recommendation is personal to you based on your answers to the questionnaire.

The questions ask about your thoughts, attitudes and experiences when making financial investments and decisions. There are no right or wrong answers. Don't spend too much time considering – your first response is probably best and answer every question even if you feel it doesn't really apply to you. Also, please give only one answer to each question.

Finally, if your circumstances change in the future you may need to complete this questionnaire again to see if your attitude to risk has also changed.
